What we do...

Solar Brite provides **utility-scale solar O&M field support** focused on the core maintenance scopes that keep sites **inspection-ready, safe, and producing.**

Since 2017, Solar Brite has grown alongside major utility operators, expanding our workforce, equipment fleet, and technical capabilities to **meet the evolving demands of large-scale solar portfolios.**

UTILITY-SCALE SOLAR SITE MAINTENANCE

○

**Fast mobilization • Safety-first execution •
Documentation-ready closeout reporting •
Easy vendor onboarding**

○

**Built for repeat maintenance cycles, rapid
response, and long-term utility-scale
portfolio support.**

EQUIPMENT AND CAPABILITIES

Solar Brite operates a field-ready commercial fleet designed for utility-scale solar maintenance. Our equipment supports large-acreage mowing, slope and precision cutting, civil attachments, herbicide application, drone documentation, and mobile panel washing across varied terrain and site conditions.

EXPERIENCE & SCALE

Solar Brite provides utility-scale solar maintenance across North Carolina, South Carolina, and Virginia. In 2025, our crew maintained 22,222 acres under active contract within the Dominion Energy portfolio. Vegetation programs typically follow four annual service cycles, adjusted for seasonal growth and site conditions. Operations are built for repeat-cycle performance, rapid mobilization, and long-term portfolio support.

COVERAGE & COMPLIANCE

Solar Brite maintains \$1M per occurrence / \$2M aggregate General Liability with \$2M Products and Completed Operations coverage, \$1M Auto Liability (Hired and Non-Owned), statutory Workers' Compensation with \$1M Employers Liability, and \$340,000 in Equipment Floater coverage. COI available upon request.

VEGETATION MANAGEMENT

Solar Brite delivers full-site vegetation management, including large-acreage mowing, rotary cutting, and integrated weed control. Crews maintain fence lines, access roads, drainage corridors, and site perimeters to preserve safe access, inspection readiness, and consistent operating conditions. Licensed commercial herbicide applications are available for targeted or full-site programs, supported by seasonal scheduling and storm-response capabilities.

PANEL WASHING

Mobile cleaning systems support fixed-tilt and tracker arrays across utility-scale facilities. Wash cycles are performed as part of scheduled maintenance programs or as required by site conditions, with photo documentation provided upon completion. Crews are trained in active solar environments and rapid site deployment.

CIVIL FIELD MAINTENANCE

Civil support includes erosion repair, grading, drainage correction, and water mitigation to protect long-term site stability. Services include access road stabilization, gravel placement, retention pond maintenance, ditching, and restoration, as required by the site scope.
